VISUAL BRIEF / USE AS IMAGE-GENERATION CONTEXT

LinguaLoop logo context

A focused desktop workspace for active language immersion: read or watch real content, look up unfamiliar language in place, and turn meaningful examples into Anki cards.

THE FEELING

Quietly capable • focused • modern • personal • fluent

The product removes the friction between noticing a word and learning it. The identity should feel like a smooth connection or loop—not like a generic translation app, classroom software, or a flashcard mascot.

INCLUDED

Product description • app UI references • visual language • logo brief • paste-ready generation prompt

01 / PRODUCT AT A GLANCE

Active immersion, without breaking focus.

LinguaLoop is a free cross-platform desktop app for people learning languages through books, PDFs/EPUBs, films, and shows. It supports Spanish, French, Italian, Japanese, Chinese, and English in any combination.

CORE LOOP

01

Immerse

Open a book, PDF/EPUB, or subtitled video.

02

Understand

Click a word or phrase for an in-context translation.

03

Remember

Create or queue a rich Anki card in one keystroke.

AUDIENCE

Self-directed language learners who value real media, durable recall, and a minimal workflow. They are often familiar with Anki and sentence mining, and want tools that stay out of the way while they read or watch.

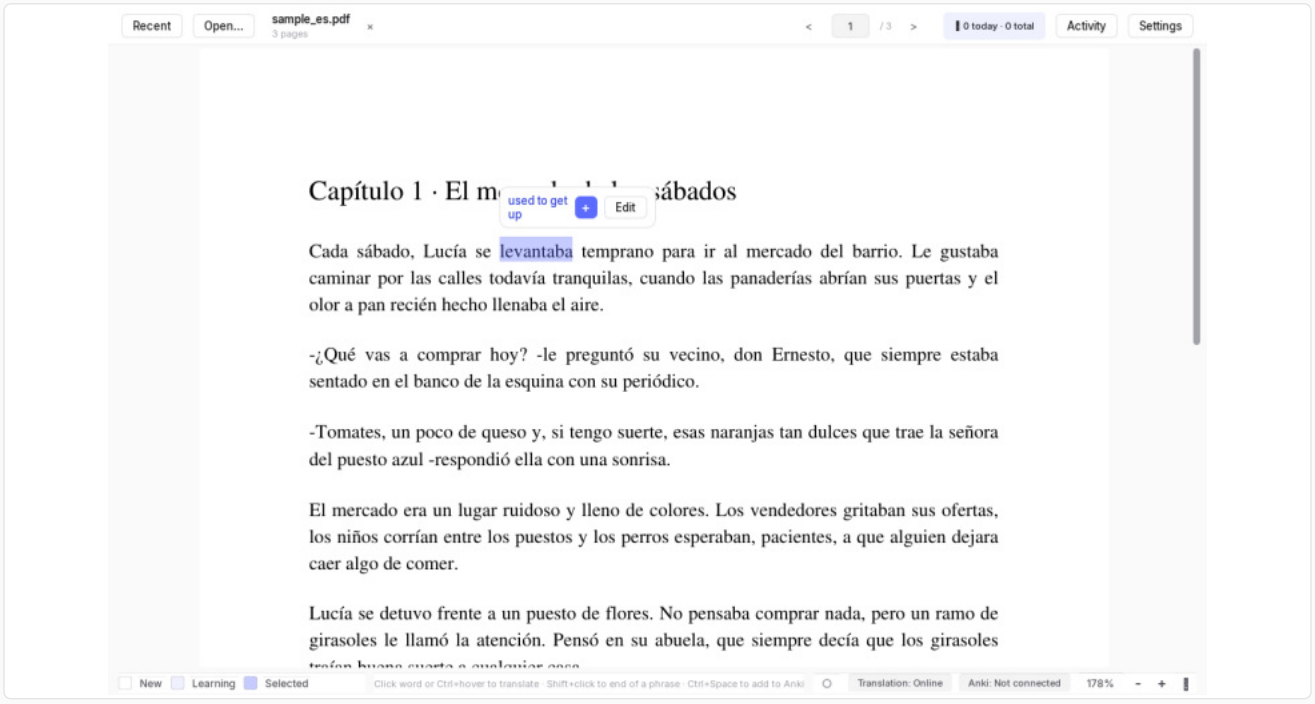

PERSONALITY

Focused · Human · Precise · Progressive

02 / THE MAIN MOMENT

The reader is the product’s center of gravity.

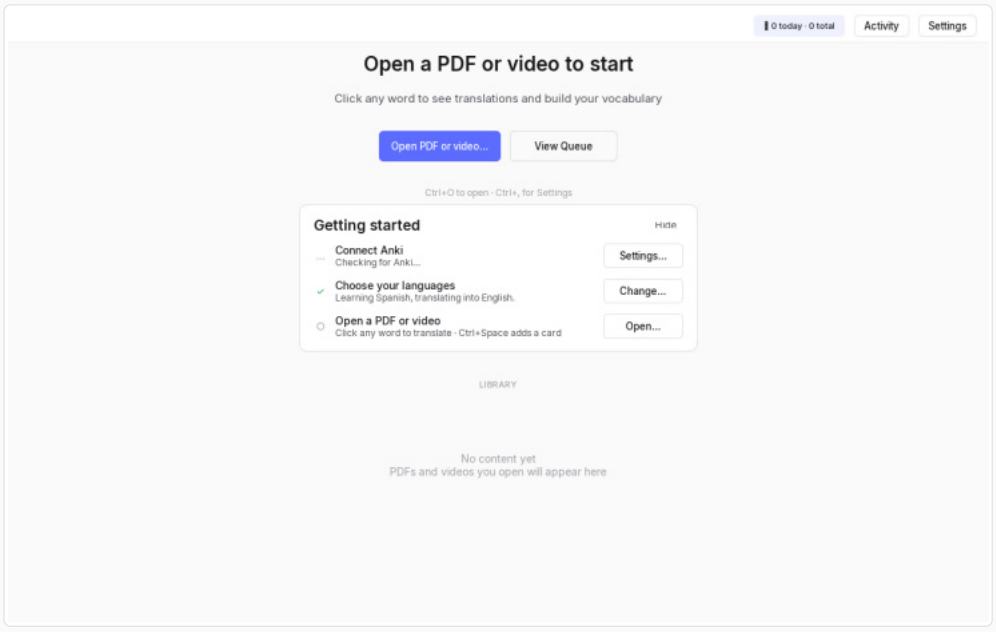

A selected word becomes an unobtrusive translation popover with an immediate “add to Anki” action. The logo should belong in this composed, content-first environment.

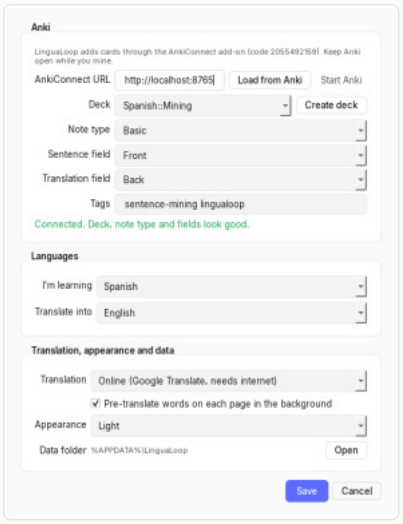

Light workspace: document page, compact command bar, indigo selection accents, and a restrained translation card.

A product with a calm, organized workspace.

The interface favors clear hierarchy, generous white space, neutral surfaces, rounded cards, and a small indigo accent. It is useful and polished rather than playful or academic.

Welcome view: recent sources and a clean library-like starting point.

Settings: practical, configurable, understated.

A loop of attention, meaning, and memory.

The identity may use the idea of a loop, a connective path, a passage from source text to understanding, or a subtle card/page cue. Keep the result simple enough to work as a small app icon.

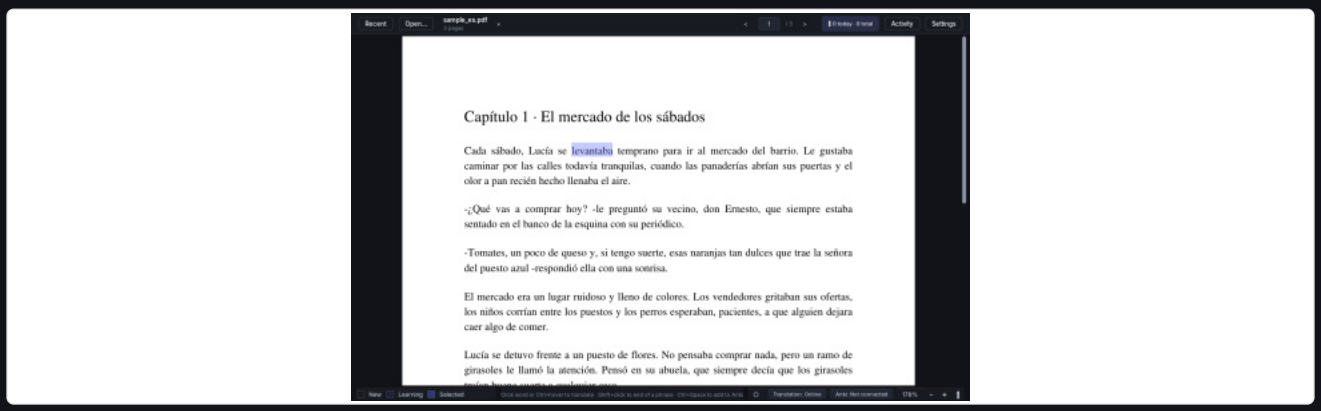

UI PALETTE

#5B6CFF

#111318

#181B22

#F3F4F6

Dark mode preserves the same restrained layout, cool neutrals, and luminous indigo accent.

05 / DIRECTION FOR A LOGO GENERATOR

Generate a distinctive mark, not a stock language

DESIRED LOGO

Create a logo for LinguaLoop, a desktop app for active language immersion and Anki sentence mining. The app lets learners read books or watch subtitled video, click unfamiliar words for translations, and save meaningful sentence examples to Anki without leaving their content.

Design a refined, minimal icon plus wordmark. Express an elegant loop of attention → meaning → memory, perhaps through a continuous path, a subtle linked-page/card motif, or an abstract letterform. It should feel focused, modern, quietly intelligent, and personal: a tool for serious self-directed learners, not a school app. Use a cool indigo accent (#5B6CFF) with charcoal/soft-neutral companions. The mark must be legible at favicon and desktop-app-icon sizes, work in one color, and be equally credible in light and dark mode. Use clean geometric forms with gentle rounding and ample negative space.

DELIVERY ASKS

• Icon + horizontal wordmark • Light and dark lockups • Single-color version • SVG-ready vector forms • No mockup-only presentation
